MATERIAL STANDARD

FOR

COLD-APPLIED LAMINATED PLASTIC TAPE

AS

OUTER-LAYER TAPE

FOR TAPE COATING SYSTEM OF BURIED STEEL PIPES

ORIGINAL EDITION

JULY 1995

This standard specification is reviewed and updated by the relevant technical committee on Oct. 1999(1) and Oct. 2011(2). The approved modifications are included in the present issue of IPS.
FOREWORD

The Iranian Petroleum Standards (IPS) reflect the views of the Iranian Ministry of Petroleum and are intended for use in the oil and gas production facilities, oil refineries, chemical and petrochemical plants, gas handling and processing installations and other such facilities.

IPS are based on internationally acceptable standards and include selections from the items stipulated in the referenced standards. They are also supplemented by additional requirements and/or modifications based on the experience acquired by the Iranian Petroleum Industry and the local market availability. The options which are not specified in the text of the standards are itemized in data sheet/s, so that, the user can select his appropriate preferences therein.

The IPS standards are therefore expected to be sufficiently flexible so that the users can adapt these standards to their requirements. However, they may not cover every requirement of each project. For such cases, an addendum to IPS Standard shall be prepared by the user which elaborates the particular requirements of the user. This addendum together with the relevant IPS shall form the job specification for the specific project or work.

The IPS is reviewed and up-dated approximately every five years. Each standards are subject to amendment or withdrawal, if required, thus the latest edition of IPS shall be applicable.

The users of IPS are therefore requested to send their views and comments, including any addendum prepared for particular cases to the following address. These comments and recommendations will be reviewed by the relevant technical committee and in case of approval will be incorporated in the next revision of the standard.

GENERAL DEFINITIONS
Throughout this Standard the following definitions shall apply.

COMPANY:
Refers to one of the related and/or affiliated companies of the Iranian Ministry of Petroleum such as National Iranian Oil Company, National Iranian Gas Company, National Petrochemical Company and National Iranian Oil Refinery And Distribution Company.

PURCHASER:
Means the “Company” where this standard is a part of direct purchaser order by the “Company”, and the “Contractor” where this Standard is a part of contract document.

VENDOR AND SUPPLIER:
Refers to firm or person who will supply and/or fabricate the equipment or material.

CONTRACTOR:
Refers to the persons, firm or company whose tender has been accepted by the company.

EXECUTOR:
Executor is the party which carries out all or part of construction and/or commissioning for the project.

INSPECTOR:
The Inspector referred to in this Standard is a person/persons or a body appointed in writing by the company for the inspection of fabrication and installation work.

SHALL:
Is used where a provision is mandatory.

SHOULD:
Is used where a provision is advisory only.

WILL:
Is normally used in connection with the action by the “Company” rather than by a contractor, supplier or vendor.

MAY:
Is used where a provision is completely discretionary.

1. SCOPE

This Standard Specification covers the minimum requirements for cold-applied laminated plastic tape to be used as outer-layer tape (outerwrap) in tape coating system to the exterior of all diameters of buried steel pipes through mechanical equipment methods. The main function of the outer-layer tape is to provide mechanical protection to the inner-layer tape (IPS-M-TP-310) and to protect the system from environmental hazards.

Note 1:
This standard specification is reviewed and updated by the relevant technical committee on Oct. 1999. The approved modifications by T.C. were sent to IPS users as amendment No. 1 by circular No. 94 on Oct. 1999. These modifications are included in the present issue of IPS.

Note 2:
This standard specification is reviewed and updated by the relevant technical committee on Oct. 2011. The approved modifications by T.C. were sent to IPS users as amendment No. 2 by circular No. 319 on Oct. 2011. These modifications are included in the present issue of IPS.

2. REFERENCES

Throughout this Standard the following dated and undated standards/codes are referred to. These referenced documents shall, to the extent specified herein, form a part of this standard. For dated references, the edition cited applies. The applicability of changes in dated references that occur after the cited date shall be mutually agreed upon by the Company and the Vendor. For undated references, the latest edition of the referenced documents (including any supplements and amendments) applies.

IPS-E-TP-270 “Engineering Standard for Coatings”
IPS-M-TP-310 "Material Standard for Cold-Applied Laminated Plastic Tape as Inner-Layer Tape for Tape Coating System of Buried Steel Pipes"
3. DEFINITIONS & TERMINOLOGY
In this Standard, the following definitions shall apply:

**Adhesion Strength**
The force necessary to remove the tape from a prescribed surface when measured in accordance with specific conditions of test.

**Dielectric Strength**
The voltage at which a single layer of tape will show electrical failure under specific conditions of test.

**Elongation**
The increase in length at break when the tape is tested under specific conditions of test.
- Elongation of tape is important as a measurement of its uniformity and quality.

**Impact Resistance**
The ability of a pipe coating to resist impact from a falling weight under specific conditions of test.

**Lot or Batch**
The lot or batch shall consist of an indefinite number of rolls, offered for acceptance, of materials manufactured by a single plant run through the same processing equipment with no change in ingredient materials.

**Outer Layer**
Coating primarily constituted to protect the inner layer from mechanical stresses.

4. UNITS
This Standard is based on International System of Units (SI), as per IPS-E-GN-100 except where otherwise specified.

5. DESCRIPTION
The outer-layer tape shall be a prefabricated tape consisting of a plastic backing of a polyethylene film and an adhesive layer of homogeneous elastomeric-sealant component laminated to the polyethylene film. Although the materials used in the outer-layer tape will provide electrical resistivity, low moisture absorption and permeability, and resistance to corrosive environments, the primary function is to provide mechanical protection to the inner-layer tape and to protect the system from the elements.

The outer-layer tape shall be compounded so that it will be resistant to outdoor weathering.

6. PROPERTIES
The outer-layer tape shall comply with the requirements of table 2, and when applied over the inner-layer tape, shall provide an effective bond to the inner-layer tape in accordance with the appropriate performance requirements given in Table 3. The outer-layer tape shall also meet the requirements of 6.1 to 6.7 inclusive.
6.1 Polyethylene Component
The polyethylene shall consist of high-molecular-weight film-grade resins with densities in the range of 0.90-0.96 g/cm³, when determined by ASTM D1505, and suitable additives.

6.2 Adhesive Layer
The adhesive layer shall be an elastomeric compound composed of a stable synthetic rubber and suitable additives. Typically, the elastomer content shall not be less than 20 percent by weight.

6.3 Appearance
The plastic backing shall be smooth and uniform, free from visible faults such as fish eyes, slits, folds, breaks, pinhole, uneven or frayed edges, and other defects that could affect appearance or serviceability.

The adhesive layer shall be smooth and uniform and as free from lumps and bare spots as the best commercial practice will permit. There shall be no adhesive transfer when the tape is unwound from the roll.

6.4 Application Properties
The outer-layer tape shall be sufficiently pliable for normal application operations and shall form an effective bond to the inner-layer tape.

The outer-layer tape shall be suitable for line-travel application and shop coating with wrapping machine or other mechanical equipment, suitable for rehabilitation and repairing with hand and no significant wrinkles or blisters shall be developed during application even under sunshine.

6.5 Color
The color of plastic backing shall be gray or white, and uv resistant.

6.6 Form
The outer-layer tape shall be supplied in roll form, wound on hollow cores with suitable diameter as will be mentioned by client with a nominal inside diameter.

6.7 Heat Aging
After test samples from inside of the roll have been aged for 30 days in an air-circulating oven at a constant temperature of 60°C, the tensile strength and the elongation shall be determined at 22°C by ASTM D1000. An average value for tensile strength and elongation shall be not less than 80 percent of the original unaged value.

6.8 Dimensions (Roll Sizes)
The outer-layer tape shall be furnished in standard widths and lengths consistent with the pipe diameter as shown in Table 1. The purchaser will specify the roll size of the tape.

7. STORAGE LIFE AND PACKAGING

7.1 Storage Life

The product shall meet the requirements of clause 6 after storage for 24 months from the date of delivery, in the original container at temperatures between +5 to +35°C.

7.2 Packaging

The tapes purchased according to this standard specification shall be rolled on a cardboard tubes with internal diameter specified by client (nominal) and packaged in suitable and approved containers so that during stocking and transport, full quality of performance is retained. Each roll of tape shall be protected from adhering to other rolls, and shall be sealed with proper shrinking to
keep entire property of adhesive to the container, or to the packaging material itself by the use of separators.

Packing shall be weather-proof and strapped on pallets suitable for long distance shipment.

8. INSPECTION AND TESTING

8.1 All materials supplied under this Standard Specification shall be subject to timely inspection by the purchaser or his authorized representative. The purchaser shall have the right to reject any material(s) supplied which is (are) found to be defective under this Standard Specification.

In case of dispute, the arbitration or settlement procedure, established in the procurement documents shall be followed.

8.2 The supplier shall be responsible for the performance and costs for all laboratory test requirements as specified in this Standard.

The supplier shall set up and maintain such quality assurance and inspection systems as are necessary to ensure that the materials comply in all respects with the requirements of this Standard Specification.

8.3 Samples of any or all ingredients used in the manufacture of this material may be requested by the purchaser and shall be supplied upon request, along with the supplier's name and identification for the sample.

8.4 Purchaser's inspector(s) shall have free access to the supplier's work to follow up the progress of the materials covered by this Standard and to check the quality of materials. The supplier shall place free of charge at the disposal of the purchaser's inspector(s) all means necessary for carrying out their inspection: results of tests, checking of conformity of materials with this Standard requirements, checking of marking and packing, and temporary acceptance of materials.

8.5 Samples submitted to the purchaser and/or collected by the purchaser will be tested in the purchaser's laboratory or in a responsible commercial laboratory including manufacturer's laboratory designated by the purchaser.

8.6 The supplier shall furnish the purchaser with a certified copy of results of tests made by the manufacturer covering physical and performance characteristics of each batch of product to be supplied under this Standard Specification. The supplier shall furnish, or allow the purchaser to collect samples of the material representative of each batch of product.

Certified test reports and samples furnished by the supplier shall be properly identified with each batch of product.

8.7 Prior to acceptance of the supplier's and/or manufacturer's materials, samples of material submitted by the supplier, or collected by the purchaser, will be tested by the purchaser.

If any of the sample rolls (see 8.8) is found not to conform to this Standard, materials represented by such sample will be rejected.

If samples of the supplier's and/or manufacturer's materials that have been previously accepted are found not to conform to this Standard, all such materials will be rejected.

8.8 Unless otherwise specified, the number of samples for testing shall consist of 10 percent of the lot, but in no case shall be less than one or more than ten rolls. The results of the tests on four specimens cut from each sample roll shall be averaged for each test specified in clause 6 to determine conformance with the specified requirements.

9. LABELING

9.1 Marking of Rolls

Each roll shall be legibly marked with the following:

a) Name and/or trade mark of the manufacturer;
b) Type and trade name of tape;
c) Length of the roll (in m);
d) Width of the roll (in mm).
e) Batch number;

9.2 Marking of Containers
Each container shall be plainly marked with the following information:

Name : Cold Applied Laminated Plastic Tape as Outer-Layer Tape for Tape Coating System of Buried Steel Pipes.

Specification : IPS-M-TP-311
Order No. : ............................................................................................
MESC No. : ............................................................................................
Type and Trade Name of Tape : ............................................................................................
Roll sizes : Length .......... m, width .......... mm.
Max. Temperature Resistance (°C) : ............................................................................................
